Endometrial Scratching

Shropshire and Mid Wales Fertility Centre

Address: Severn Fields Health Village, Sundorne Road,
Shrewsbury SY1 4RQ.

Tel: 01743 261202 / 01743 261199

Introduction

These notes give a guide to your visit to the fertility centre and what it may be like afterwards. They may not cover everything and, as you are an individual you may wish to know more, in which case, please ask.

Implantation is the word used to describe the embryo attaching to the lining of the uterus (womb) and is an essential step in the development of a pregnancy. Recurrent implantation failure (RIF) is defined as the repeated transfer of a healthy looking embryo to a healthy uterus without achieving successful implantation and pregnancy.

It is important to understand that whilst there is some evidence of benefit from endometrial scratching, this is not completely proven. For further information on endometrial scratching including its effectiveness please refer to

www.hfea.gov.uk/treatments/explore-all-treatments/treatment-add-ons/

www.shropshireivf.nhs.uk/fertility-treatments-and-investigations/addons/ .

The unit is now offering women with failed implantation the option of Endometrial Scratching, a procedure where a thin tube, called a catheter, is passed through the cervix (the opening to the uterus) to gently scratch the lining..

Risks, Benefits and Alternatives

Risks

There is a small risk that if you have an infection within your cervix before this procedure, this may cause the infection to spread up into the uterus. If this occurs it can be treated.

Benefits

Some studies have shown higher implantation, pregnancy and most importantly live birth rates following endometrial scratching, particularly in women who have previously had four or more unsuccessful cycles. However it should be noted that our governing body, the HFEA, rate this procedure as 'Amber' meaning that they do not believe there is clear evidence of benefit to patients.

Preparation for Procedure

When is it done?

Endometrial scratching can be done at any time of the menstrual cycle preceding the treatment cycle.

You should avoid trying to get pregnant in the menstrual cycle in which endometrial scratching is performed.

Patients must not wear any perfume, deodorant, make up or hair products to this appointment

What happens when you arrive for your appointment?

How is it carried out?

Endometrial scratching is a simple procedure similar to an embryo transfer.

A medical instrument called a speculum will be used to find the cervix which is then cleaned with a saline solution. A small catheter is then passed through the cervix into the uterus and suction applied. The aim is to remove/scratch some of the endometrium (lining of the womb). The speculum is then removed and you can get dressed and go home when you are ready.

Is it a painful procedure?

Endometrial scratching may cause mild abdominal cramping similar to period pain. If required, you can take paracetamol for pain relief. Some mild bleeding is not unusual after the procedure, so you need to bring a sanitary towel to use after the procedure.

Consent

We ask for your consent prior to the procedure. You can withdraw or vary this consent at any point if you change your mind. Patients funding their own procedure should bear in mind that the clinic or their private consultant (if they are having private treatment) may impose a fee if the procedure is cancelled at short notice.

Personal Data and Confidentiality

You will be asked to sign a "consent to disclosure" form early on in your treatment pathway so that we can share your information with other professionals when it is necessary. We follow guidelines set by the Shrewsbury and Telford Hospital Trust and by our regulators, The Human Fertilisation and Embryology Authority to ensure we keep your personal information secure.

Counselling

A specialist fertility counsellor is employed by Shropshire and Mid Wales Fertility Centre. Please let our staff know if you think you need an appointment. Please be aware there may be a cost for this service if you are funding your own treatment.

Contact details for more information

Useful telephone numbers

Fertility nursing team **01743 261202** or call the hospital switchboard on **01743 261000** and ask to be put through to the Fertility unit. Please note the department accepts calls from 9am to 5pm Monday to Friday.
