

## Fertility Treatment Pricing Examples and Guide to Billing – IVF and ICSI

Unfortunately not everyone is eligible for fertility treatment on the NHS and we recognise it is an expensive undertaking. At Shropshire and Mid Wales Fertility Centre we have three different options for patients who are paying for their own treatment. The treatment pathway you choose does not affect your chance of having successful treatment, but you may find that one pathway is preferable or suits your personal circumstances. Further information can be found on our website [www.shropshireivf.nhs](http://www.shropshireivf.nhs).

### 1. Self-Funded Treatment.

If you choose this option you will essentially follow the same treatment pathway as NHS patients. You will see the same team of healthcare professionals that an NHS patient would and pay the hospital directly. NHS waiting lists will not apply so you would be able to have your treatment in the next available suitable slot, once all the necessary tests and paperwork is complete. Self-funded treatment is less costly than traditional 'Private' treatment but we cannot guarantee you will see the same doctor throughout. If you choose to have treatment funded this way please contact the Fertility department on 01743 261202 option 2 in the first instance.

### 2. Private Treatment

If you wish your treatment to be under the care of Mr Sizer, Consultant Gynaecologist, whom you may have already met in one of our NHS clinics, please contact the Nuffield Hospital in Shrewsbury on 01743 282500 to arrange an appointment with him. Your initial appointment will be to discuss your history and draw up a treatment schedule. You will then be asked to contact our clinic. If you choose this treatment option please expect to have bills from the Shrewsbury and Telford Hospital Trust (Fertility and Pathology departments) and Mr Sizer. This option is more expensive than self-funded treatment, but you will have one Consultant as your point of contact dealing with you throughout your treatment.

### 3. Access Fertility

The Shropshire and Mid Wales Fertility Centre have partnered with a company called Access Fertility to provide you with an alternative way of funding your treatment. Depending on your medical history, age and personal circumstances Access Fertility can offer a set price fertility treatment package of fresh and frozen treatments with the possible added security of a whole or partial refund if you do not have a baby as a result of the treatment. Please note that whilst the treatment package is comprehensive, additional charges will apply for investigations and for all appointments before your first treatment monitoring scan. These will be on a self-funded basis. Medication is not included and will cost between £1000-£2000 for a cycle of IVF/ICSI and around £250-350 for a frozen transfer. Additional procedures such as endometrial scratch or a surgical sperm retrieval, if required, will need to be on a self-funded basis. For further details on this please visit their website [www.accessfertility.com](http://www.accessfertility.com). If you choose this route your first point of contact should be with Access Fertility, unless you have any specific questions for our clinic. When you contact Access please let them know that you wish to be treated at the Shropshire and Mid-Wales Fertility Centre.

**Summary of benefits and drawbacks**

	<b>Benefits</b>	<b>Drawbacks</b>
Self Funded Treatment	Cheaper	You may not see the same doctor throughout treatment.
Private Treatment	Single medical Consultant monitoring and delivering your egg collection and/or embryo transfer	More expensive
Access Fertility	<p>May be entitled to full or partial refund if you do not have a baby as a result of your treatment.</p> <p>Fixed price treatment package (some additional charges apply).</p> <p>Can be very cost effective if multiple cycles and FETs are needed</p>	Would work out significantly more expensive than the other options if you became pregnant on the first cycle.

It is often difficult to give patients an exact cost for their treatment beforehand as everyone’s circumstances are different. For example, some patients will need more medication prescribed than others, some will have extra embryos to freeze or opt to use timelapse incubation and others won’t. Some patients will need diagnostic tests whereas many others will have already had this done recently in earlier treatment, for this reason we don’t include the cost of diagnostics and your initial appointment in the cost of a treatment cycle. If you are a new patient who has not had diagnostic tests recently then you will need a standard fertility health check package at the cost of £500 or be prepared for the cost of the tests your consultant recommends.

As a very general guide self funded and private patients are advised to budget for between £5500 and £7000 for a cycle of IVF (with one transfer) and an additional £700 if ICSI is required. Patients needing a frozen cycle are advised to have between £1500-2000 available to them to cover the cost. At the end of this document there are two examples of the cost of IVF for two patients, one of whom is a new patient, never seen before in the fertility unit and one for a returning patient who is funding their own treatment after having unsuccessful NHS treatment recently. Again, these are intended as examples only.

Please note that the cost of a self-funded or private fresh cycle only includes one transfer and not the transfer of any embryos that may be frozen for use at a later date if you wish. Access packages include the transfer of any embryos collected and frozen in the fresh Access cycles.

**It is important to note that the chance of success is the same, no matter which pathway you choose.**

**Overleaf are some tables which detail the cost of fertility treatment on the three pathways.**

Diagnosis/Work up	Self Funded	Private	Access
Standard Fertility Health Check	£500	N/A. Steps priced individually below	£500
Initial appointment/ history taking (only needed in first cycles)	With fertility nurse Included in FHC	With Mr Sizer £170	With fertility nurse Included in FHC
Diagnostic bloods (normally AMH, FSH and Progesterone) (Others requested by doctor are extra)	Included in FHC	Payable to Pathology £84.12 Plus others as required. A £5 phlebotomy charge may also apply for sampling.	Included in FHC
Baseline scan (diagnostic)	Included in FHC	Total £210 £110 payable to clinic £100 payable to Mr Sizer	Included in FHC
Semen analysis (heterosexual couple)	Included in FHC if heterosexual couple	£122 payable to clinic	Included in FHC if heterosexual couple
CMV screening Blood group if required. (same sex couple or single woman)	Included in FHC if same sex couple / single woman	£108.68  £45.00	Included in FHC if same sex couple / single woman
Follow up / medical review	Included in FHC	£120 payable to Mr Sizer	Included in FHC
Pre-treatment screening tests (valid for 2 years)			
Swab for STD's (if required)	£40.04 payable to pathology	£40.04 payable to pathology	£40.04 payable to pathology
Screening bloods (only required once every 2 years)	£217.36 Payable to pathology	£217.36 Payable to pathology	£217.36 Payable to pathology
IVF/ICSI Treatment	Self Funded	Private	Access
Treatment package Includes: Monitoring Scans (up to 4) Nurse consultations Admin charge Procedure and Lab charges (IVF or ICSI) HFEA charge Pregnancy reassurance scan	£3232 IVF or £3932 ICSI	£3232 IVF or £3932 ICSI	Included in Access Package (* please note if you require an ICSI when you are on an IVF package you will have the option to pay clinic a top up of £700 or upgrade package with Access)
Medication	Varies between patients/cycles. Allow £1000-2000	Varies between patients/cycles. Allow £1000-2000	Not included. Varies between patients/cycles. Allow £1000-2000
Doctor's charges (scheduling and procedure etc)	£633 Self funded surcharges	£800 Payable to Mr Sizer	Included in Access Package
E2 bloods (monitoring) (* if 4 or more required cost is £21.04 each)	Not included £28.54 for up to 3 * Payable to pathology	Not included £28.54 for up to 3* Payable to pathology	Included in Access Package

Embryoscope (optional)	Not included Optional £788	Not included Optional £788	Included in Access Package
Blastocyst culture	Included	Included	Included
Cryopreservation  (only payable if spare embryos are to be frozen and includes first year's storage)	Not included Optional £387	Not included Optional £387	Included in Access Package
<b>Other</b>	<b>Self Funded</b>	<b>Private</b>	<b>Access</b>
Semen analysis (second sample without antibodies)	£100	£100	£100
Counselling - support	1 <sup>st</sup> session free 1 session after negative included. Other chargeable £44	1 <sup>st</sup> session free 1 session after negative included. Other chargeable £44	1 <sup>st</sup> session free 1 session after negative included. Other chargeable £44
Counselling – implications Mandatory for donor cycles	Not included £44 to clinic	Not included £44 to clinic	Not included £44 to clinic
Endometrial scratch	£250 Payable to clinic	£279 (£139 payable to clinic and £140 payable to Mr Sizer)	£250 Payable to clinic
PESE/TESE Includes procedure with sedation, Scientist consultation and first year's storage of any sperm found	£1590 Payable to clinic (includes self funding surcharges)	£2007 (£1257 Payable to clinic and £750 payable to Mr Sizer).	£1590 Not included in Access package Payable to clinic on a self funded basis
Pregnancy reassurance scan following successful treatment	Included in treatment package	Included in treatment package	Included in Access package
Doctors follow up appointment (if necessary)	Included in self funded treatment package	£120 Payable to Mr Sizer	Included in Access package
Scientific follow up appointment (if required)	Included in self funded treatment package	Payable to clinic £39	Included in Access package
Donor sperm (if required)	Not included Approx. £1000-2000 per cycle	Not included Approx. £1000-2000 per cycle	Not included Approx. £1000-2000 per cycle
Annual Storage (First year is included in your cryopreservation cost - after 1 <sup>st</sup> year becomes payable)	Not included Payable to clinic if embryos in storage. Annual fee £193	Not included Payable to clinic if embryos in storage. Annual fee £193	Not included Payable to clinic if embryos in storage. Annual fee £193

### Frozen Treatments

Self-funded and Private cycles only include the treatment and a fresh transfer. The transfer of any additional embryos frozen in that cycle is an additional cost.

An Access package includes the transfer of all frozen embryos created in their fresh cycle. If your treatment is successful and you have a baby then no further transfers are funded by Access, though you can choose to have them transferred as a self-funded or private patient if you wish to have further treatment in future.

The table below gives a breakdown of what you can expect to pay for a cycle of frozen treatment.

	Self Funded	Private	Access
Frozen treatment package (Includes monitoring scan/s, nursing care laboratory work, procedure overheads, HFEA charge, admin)	£1236	£1236	Included in Access package
Doctor's charge (scheduling and procedure)	Payable to clinic £211	£250 Payable to Mr Sizer	Included in Access package
Medication	Payable to clinic. Price varies approx. £250-350	Payable to clinic. Price varies approx. £250-350	Payable to clinic. Price varies approx. £250-350
Endometrial scratch (optional and only offered to patients we feel may benefit)	Not included Payable to clinic £250	£279 (not included) £139 payable to clinic and £140 payable to Mr Sizer	Not included Payable to clinic £250

Once decided on treatment pathway patients need to be aware that their bills will be issued by more than one person/department.

1. Bills from the Shropshire and Mid Wales Fertility Centre are issued by the Shrewsbury and Telford Hospital (SaTH) Finance Department on our behalf or taken directly by our staff using a card machine.
2. Bills from the SaTH Pathology Department for routine blood sampling, screening and diagnostic tests are issued by Shropshire Consultant Pathology Services.
3. If you are a private patient of Mr Sizer's you will also have bills for his services issued by his private secretary.

### 1. Shropshire and Mid Wales Fertility Centre

These bills will differ from patient to patient and cycle to cycle as treatment plans vary between individuals. Staff will be able to guide you as to what, in their experience, you are likely to need but sometimes it is difficult to predict how the body or the eggs/sperm/embryos will react, in these cases extra charges can apply and we will do our best to inform you of these as soon as possible.

Your medication must be paid for at the time of treatment scheduling (when we book your treatment) so that we can release your prescription to our supplier Fertility2U and arrange for your drugs to be delivered to you in plenty of time. Once contacted by Fertility 2U please accept delivery as soon as you can. Prescriptions often have a time limit on them and if this expires and it has to be rewritten then additional charge will apply. One of our administrators will contact you to take payment over the phone. For this reason, we politely ask that you have up to £2000 for IVF and up to £500 for FET available to pay for medication and appointments once you know we are working on your treatment plan. A card machine is available in the Fertility Centre for making payment. Please

note that we cannot accept any cash payments. If you are unable to make a payment via a card please contact the unit in advance so we can arrange an alternative method.

Your treatment price includes IVF/ICSI and associated laboratory costs, nursing care and appointments, treatment monitoring scans, administration and Human Fertilisation & Embryology Authority (HFEA) charge. It also includes a pregnancy reassurance scan if your treatment is successful. This bill must be paid before your baseline scan date, approximately two weeks before scheduled egg collection. It will generally be invoiced in advance from our Trust Finance Department and may be paid to them over the phone by card or by bank transfer. All major credit cards are accepted. Unless this bill is settled your treatment will not be able to go ahead and a cancellation charge will apply.

You can expect to receive bills if you have any of the following: Diagnostic tests e.g. scans or semen analyses which are outside of the package you have paid for, screening tests prior to treatment, any additional nurse/scientist consultations, private or additional counselling, surgical sperm retrieval, etc. These may be issued in advance or on the day. You will also need to make extra payments if you have any "add ons" such as an endometrial scratch or time lapse imaging (embryoscope), have any surplus embryos frozen or need any extra top up drugs. These may have to be paid for on the day. You may receive extra bills from the department if the procedure changes from what was originally planned e.g. you were scheduled for IVF but found on the day ICSI would be more appropriate.

If you are using donor sperm or donor/shared eggs there are extra charges incurred which will be fully explained to you by centre staff.

Following your treatment you will be billed annually for any embryos/eggs/sperm you want to remain in storage. The first year of storage is included in your payment for embryo freezing, which is charged when and if you freeze embryos. After the first year expect to be billed around £200 per year for their continued storage around the anniversary of your treatment.

### **Cancellations**

You will be asked to sign a financial declaration stating you agree to pay for all costs incurred as part of your treatment. Please be aware that if you cancel an IVF/ICSI cycle after the schedule has been written then a £525 cancellation fee will be payable as this slot will be unable to be offered to another patient at short notice. If an FET/FBT is cancelled after scheduling then an administration charge of £132 will be payable.

Appointments that are not attended or cancelled within 24 hours are subject to a cancellation charge, which may be the full cost of the appointment.

### **Invoices/Credit Notes and Refunds**

Invoices are issued by the Shrewsbury and Telford Hospital Trust Finance Department.

In the event of an amendment to your cycle it may be necessary to issue a credit note to cancel all or part of an invoice you have already received. This is calculated on an individual basis. These have to be issued for audit purposes, even if the invoice has not been paid and is being replaced. Please

check your invoices carefully on arrival, credit notes are marked as such. If money has been paid it will be kept on hold if the next treatment is imminent or refunded on your request.

Please note that invoices are also generated following a card payment, it is not a request asking you to pay again. Please check your documents carefully. Any queries with your invoices should be raised with the Finance department in the first instance. Their contact details will be on the invoice.

If you are unlucky enough to have your cycle abandoned before egg collection some costs are still incurred by you (drugs, scans and administration), the procedure and HFEA fee will be refunded or held in credit if your treatment is being rescheduled (This is £2,580 for IVF or £3,280 for ICSI). If your egg collection is unsuccessful or there is a total failure of fertilisation then only the transfer element of the treatment cost can be credited/refunded which is £350. If no fresh embryo transfer takes place due to the patient developing OHSS and the embryos are frozen then there will be no charge for the subsequent embryo transfer (except medication).

Drugs are non-returnable and non-refundable once dispensed.

Please be aware that unfortunately treatment can fail at any stage irrespective of the quality of care and treatment provided. The Shrewsbury and Telford Hospitals NHS Trust will not offer refunds for treatment provided.

### **Medication**

Please note that your medication is provided by an independent homecare pharmacy company called Fertility2U. You do not pay them directly, it is all handled through the fertility unit and SaTH pharmacy. You will be charged a delivery/dispensing charge and a prescription handling fee as part of your drugs bill. Drugs costs vary between patients, to be on the safe side we advise you allow between £1000-2000 to cover the drugs needed for a full cycle of IVF and around £250-350 for a Frozen Cycle. If you have drugs left from a previous cycle these may be able to be used in a future cycle providing they've been stored correctly. Please inform your Consultant and the Fertility unit asap if this is the case as it can reduce your costs.

Once Fertility 2U make contact to arrange delivery of your medication you are advised to accept this as soon as possible. Some prescriptions have an expiry date and if delivery is delayed past this date there will be a charge for the prescription to be rewritten.

Please be aware that all medication is non-refundable once it has been delivered. If a prescription is cancelled after Fertility2U have prepared it, even if you don't accept delivery there is a £20 administration fee that is payable.

Your Consultant may also issue Private Prescriptions for small amounts of drugs and top ups if required. You have to take these prescriptions to a pharmacy to be dispensed and pay the pharmacy direct for the full cost of the medication.

## 2. Your Private Consultant (only applicable if you are a private patient)

Your private consultant will bill for their services separately from the unit. They charge for consultations, planning and the procedures they perform. Details of these prices can be obtained from their private secretary, whose details are on your letter.

Please be aware that if you cancel your cycle after scheduling a cancellation fee will also be payable to your consultant. This is currently £50 for a fresh or frozen cycle cancelled after scheduling but before treatment has started. Additional charges will apply if cancelled after treatment has started.

## 3. Pathology Department – Blood Tests

You will also receive bills from the SaTH Pathology Department. These are bills to cover the cost the laboratory tests they perform such as blood tests and analysis of genitourinary swabs for diagnosis or screening. If you have paid for a Fertility Health Check package your initial diagnostic bloods (AMH, FSH and Progesterone) are included in the package.

Screening blood tests normally don't have to be repeated for 2 years, so are not payable in subsequent fresh cycles and FETs done within this time.

On occasions your Consultant may need to request tests to be done at other laboratories for example, cystic fibrosis and karyotyping. If this is the case it will be discussed by the Consultant at your initial appointment. These will be billed separately. The current prices for these are as follows:

Cytogenetic Test CF + Chromosomes (Birmingham)	£422
Cytogenetic Test CF Only	£211
Cytogenetic Test Chromosomes only	£250

### Further Information

Further information on our prices and billing can be found on our website [www.shropshireivf.nhs.uk/prices](http://www.shropshireivf.nhs.uk/prices) and on your financial agreement forms.

The following pages include some worked examples for common scenarios including a patient who has not previously had any fertility investigations or treatment and one who has recently had treatment and is returning for another cycle. A second cycle is usually less expensive than the first as it is not necessary to do diagnostic tests and screening again within 2 years unless an individual's circumstances have changed. It is important to note that these are examples only for the most common situations. In reality extra charges may apply e.g. additional blood tests and the cost of medication will almost certainly be different from the £1500 used for the example (it is often a little less than this but rarely can be more). Please remember to allow an extra £700 if ICSI is necessary rather than IVF.

**Example 1 – A heterosexual couple, who have not had fertility investigations or treatment before, requiring full work up before the medical appointment that recommends IVF treatment.** In this example the patient had embryos to freeze, chose to use the embryoscope (optional extra), chose to have both a medical and a scientific follow-up appointment and her medication totalled £1500. They did not need donor sperm, male surgery, endometrial scratch or counselling.

<b>Diagnosis/Work up</b>	<b>Self Funded</b>	<b>Private</b>	<b>Access</b>
Fertility Health Check (FHC) package	£500	All elements charged individually	£500
Initial appointment/ history taking (only needed in first cycles)	Included in FHC	With Mr Sizer £170	Included in FHC
